# What is a Habitat?

A habitat is a place where animals and plants live.

A habitat needs to have clean water, food and air.

Animals and plants need these things to live.

A habitat can be a home for many insects, birds and plants.

# Local Habitats

Local habitats are the habitats around us. **Backyards**, schoolyards and **parks** are local habitats.

Birds, insects and other small animals can live in all of these places.

What can you see in your backyard?

A park with a pond can be a habitat for ducks and other water animals.

Parks can have many different plants and trees.

Sometimes there is a lake or pond.

Ducks and other animals can look after their babies near the water.
