Animals That Climb

Lots of animals are very good at climbing.

Some animals need to climb to get food.

Tree frogs climb trees to catch insects. Some goats climb trees for food, too!

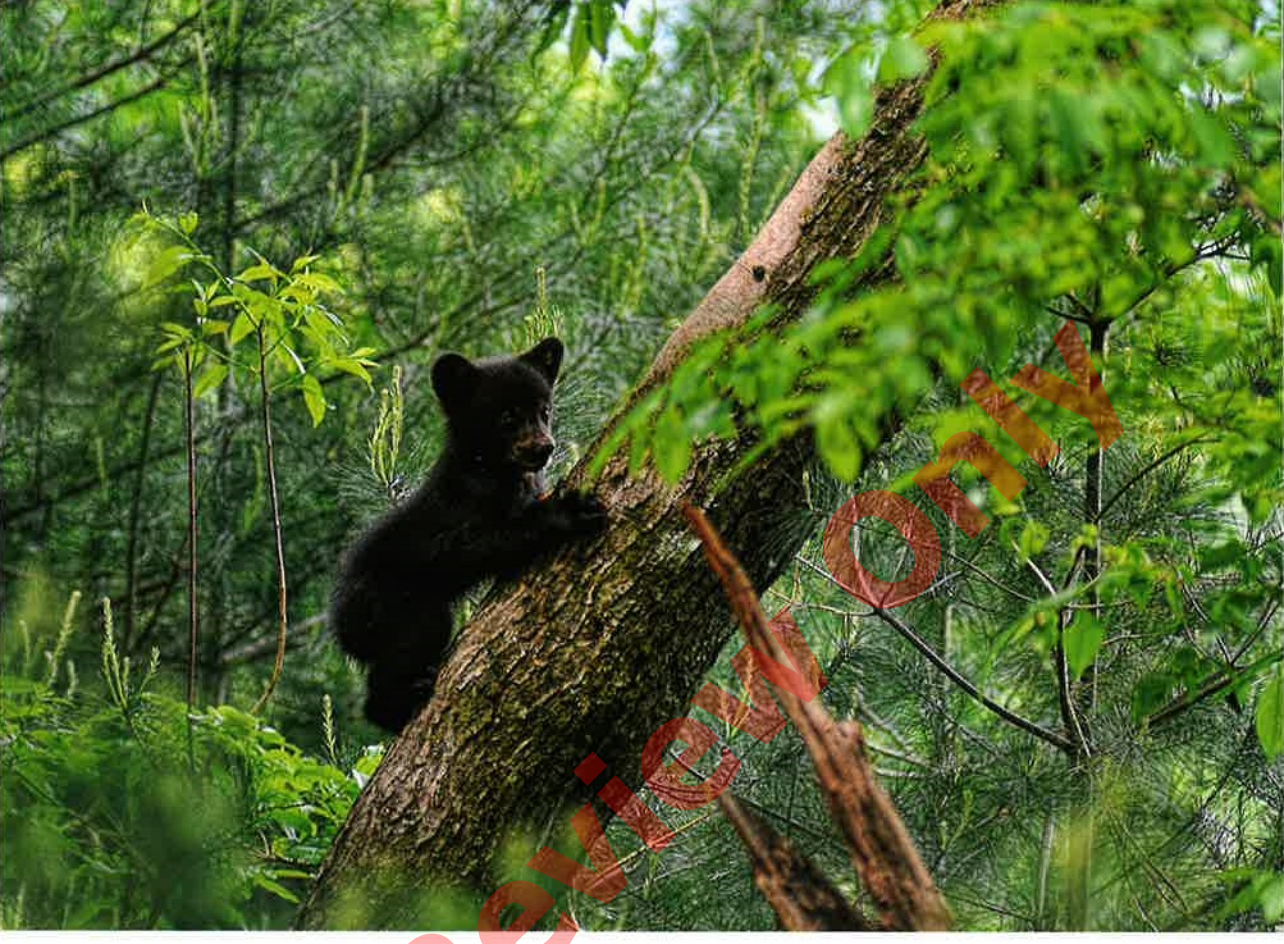

For Review Only

This tree frog eats insects in trees.

These goats climb trees to eat the fruit.

Other animals need to climb
to stay safe.

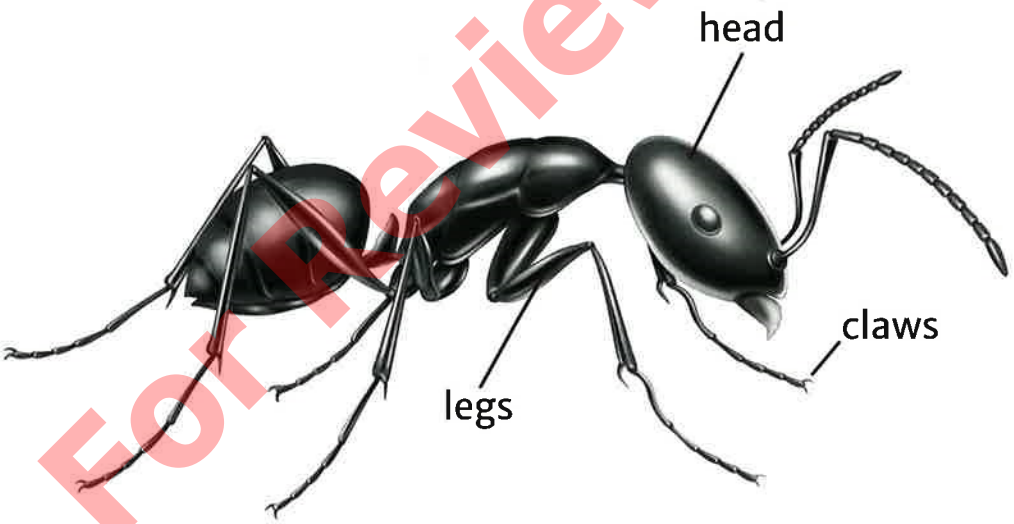

Sometimes, bear cubs climb trees
to hide from hungry, bigger bears.

Ants

Lots of insects are clever climbers.

Ants are very good at climbing. They have tiny claws at the ends of their legs to help them climb.

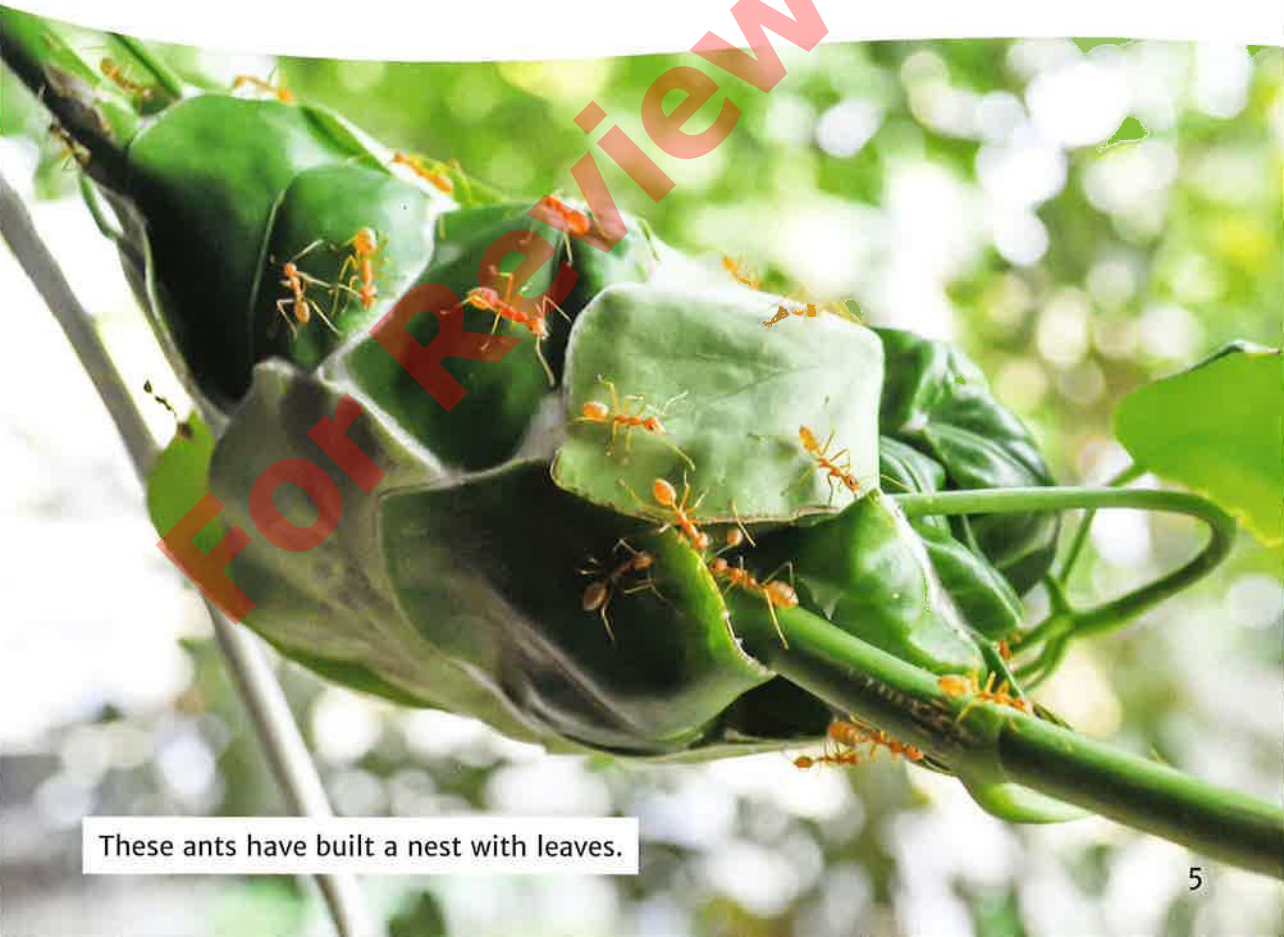

For Review Only

Ants can climb up walls
to get into buildings.
Sometimes, they look
for a warm place to make a nest.

Some ants climb up and down trees.
They build their nests in the treetops.

For Review Only

These ants have built a nest with leaves.

Stick Insects

Stick insects are insects
that look like little sticks.

They have claws on their feet
to help them climb.

Stick insects hide in trees and eat leaves.
They can walk upside down on branches!

When it is windy, stick insects sometimes fall
off the branches,
but they quickly climb up again.
