Introduction

There are many places
on Earth.

There are hot places.

There are cold places.

Earth has wet places.

It has dry places, too.

This book is about
some of these places.

Deserts

Deserts are dry places.
Deserts are very hot in the daytime.
They are cold at night.

Camels live in some deserts.
Camels can walk a long way.
They do not have to drink
for about five days.
Camels look about for shade
when it is hot.
They look about for shelter
when it is cold.

Grasslands

Grasslands are plains covered with grass. There are few trees there.

Grazing animals live on grasslands. They eat the grass. Zebras are grazing animals. They eat grass all day. They live on grasslands in Africa. They live in small groups. They can also live in big herds.
