Introduction

The **Sun** lights up the sky.
The sunshine feels warm on our skin.
Have you ever wondered why?

The Sun gives us light and heat during the day.

For Review Only

What is the Sun?

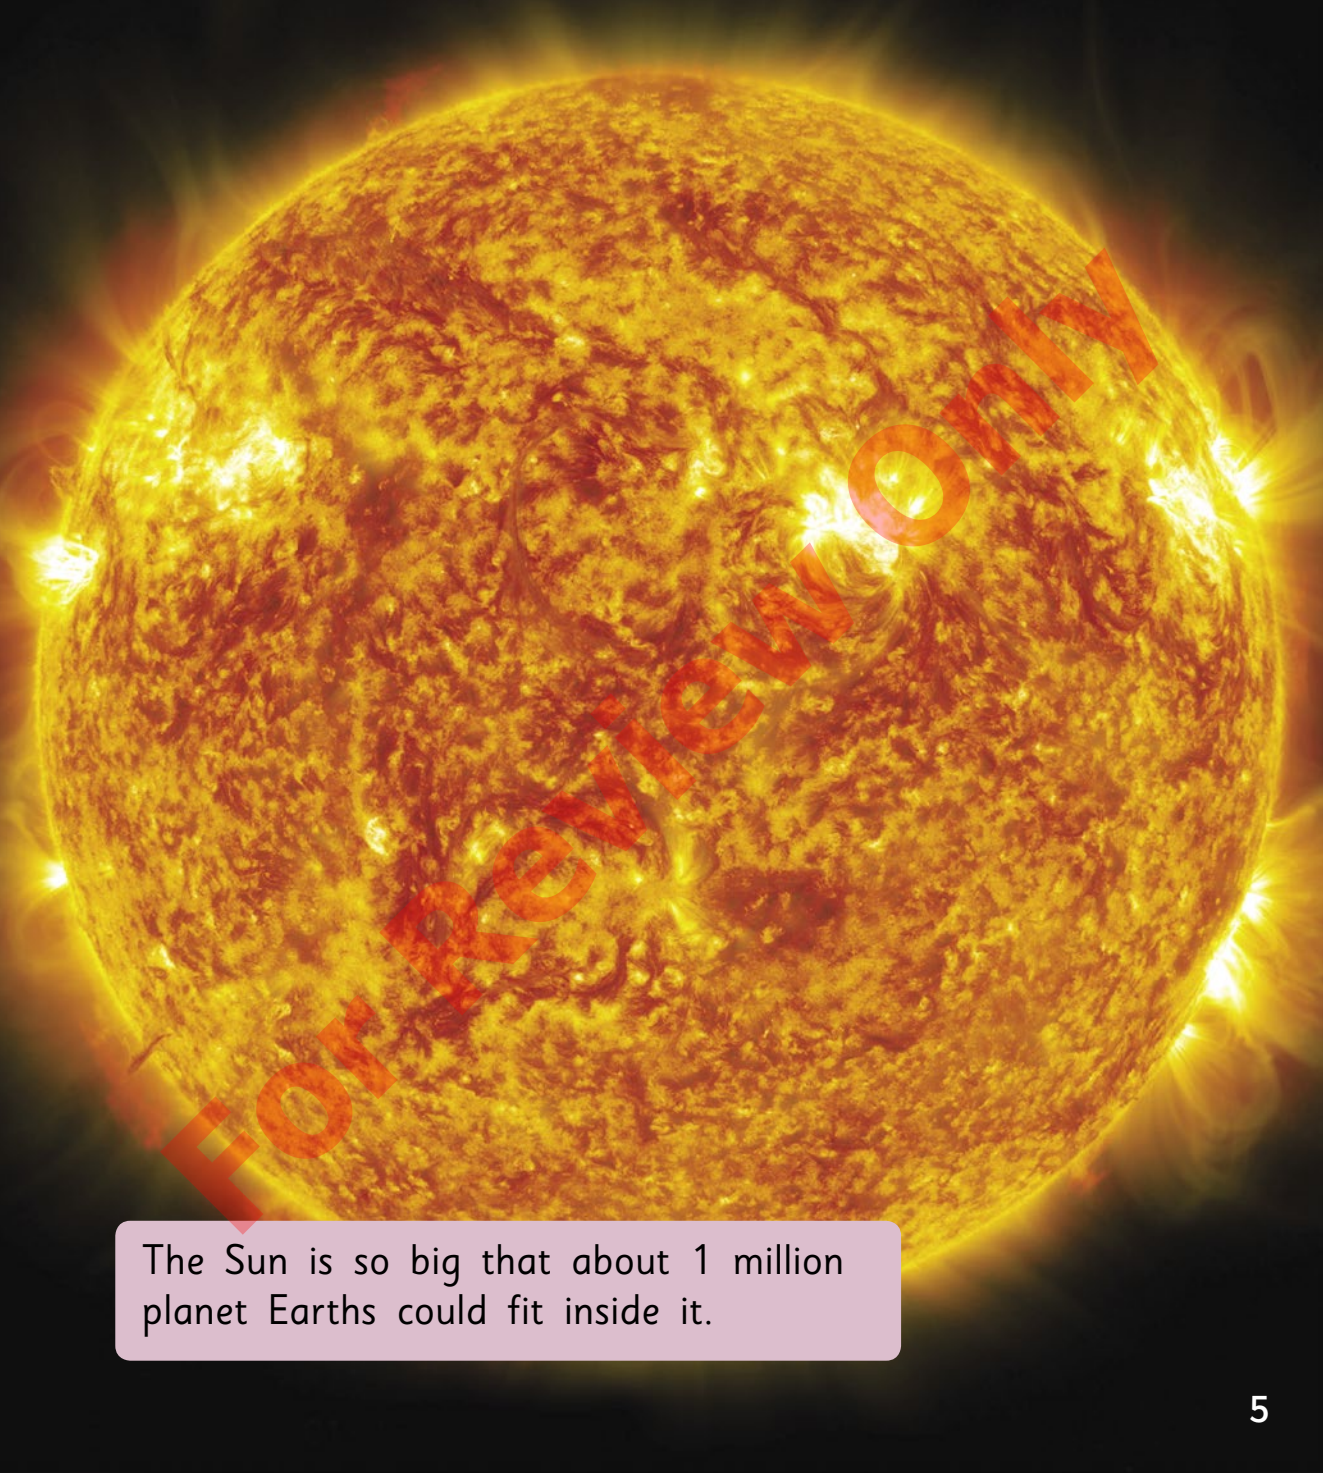

Our Sun is a **star**.
A star is a big ball of burning gases.

The Sun is enormous and it is very hot!

Think about heat from a pot of boiling water.
The Sun is over a million times hotter.

Average Temperatures			
Human body	Boiling water	Melted iron	Sun's surface
37°C	100°C	1530°C	5500°C

For Review Only

The Sun is so big that about 1 million planet Earths could fit inside it.
