

In a Whirl

Written by Helen Bethune

When I grow up, I want to work with animals. There are lots of ways to do that. So I played a game with my globe. I whirled it very fast. Then, I closed my eyes and stopped it with my finger. It landed in the middle of the ocean!

I thought really hard about that. What could a scientist do there? Then, I remembered a program I saw on TV. It was about scientists who work with sea animals. It was amazing! Maybe, I could be a marine biologist. They look for rare sea creatures and collect data.

The ocean is so deep it has been divided into zones. Most sea creatures live in the top zone. That's because they need light. I would love to go swimming there. I could swim with dolphins, turtles, and coral!

For teachers' inspection ONLY

Maybe I could dive down to the next zone. The deeper you are, the less light there is. The fish have huge eyes so they can find food. They look weird and a bit scary.
