Living around the World

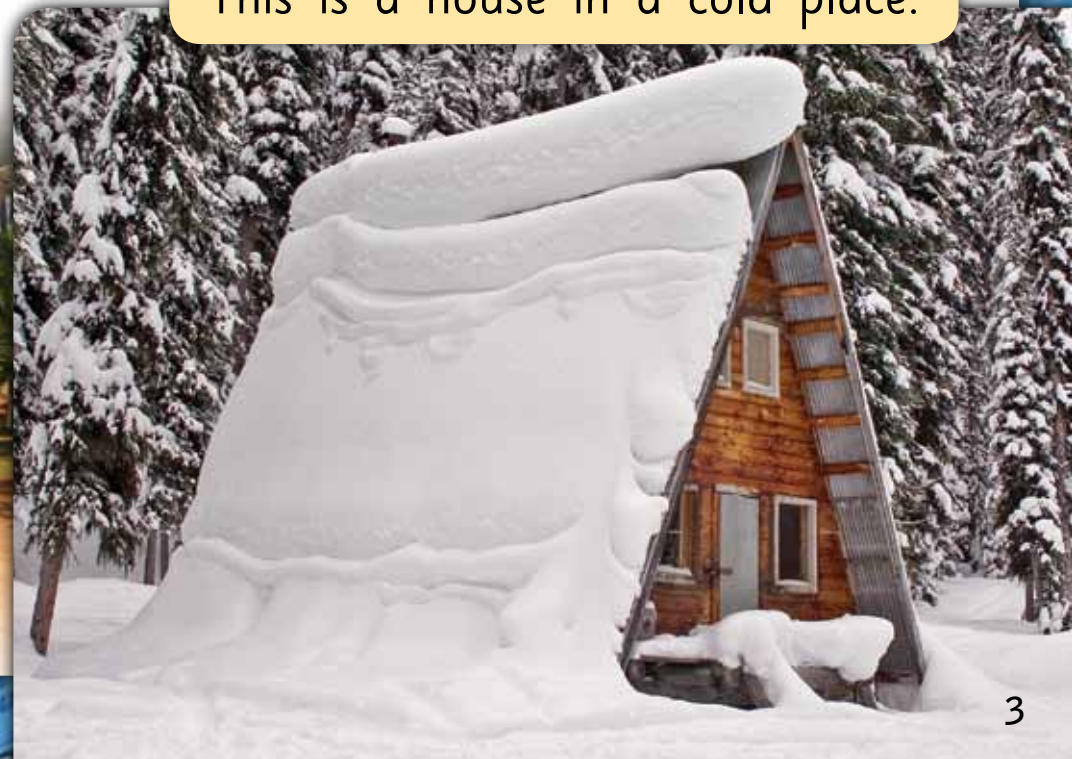

People live all around the world.
They live in dry places,
such as deserts.
They live in wet places,
such as rainforests.
They live in cold and hot places, too.

This is a house in a hot place.

The usual weather in a place
is called its climate.
People build their houses to suit
the climate.

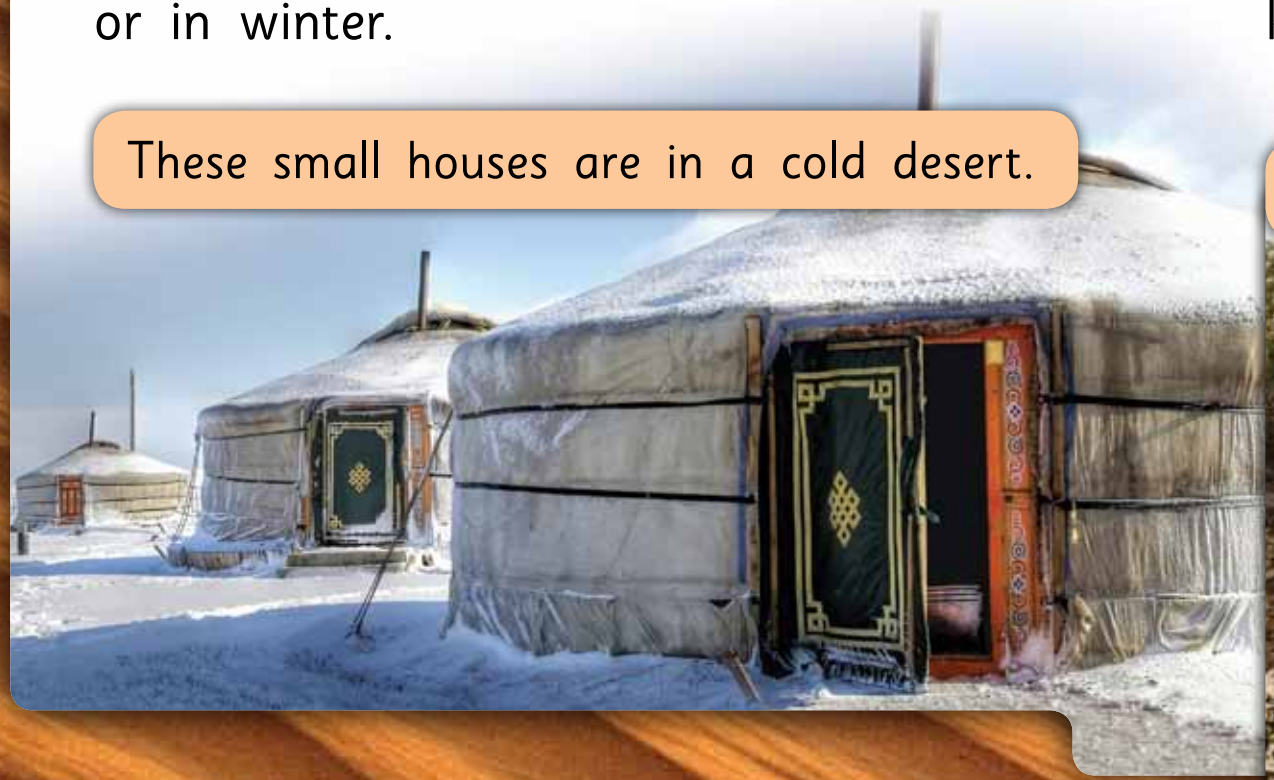

This is a house in a cold place.

Living in Dry Places

Deserts are very dry.
It is so dry, the soil can crack.
Deserts are usually hot during the day.
Some deserts are cold at night
or in winter.

These small houses are in a cold desert.

Deserts do not have many trees,
and the trees are usually small.
Some people build small mud houses.
Small windows help
keep the houses cool.

These small houses are in a hot desert.

Living in Wet Places

Rainforests are warm, wet places.
There are rainforests
in many places around the world.
Rainforests get a lot of rain.

This house is in a rainforest.

Many big trees grow in rainforests.
Some people cut down the trees
to make their houses.
Some people get food,
such as fruits, from the trees.

This child is picking fruit.
