Water World

Clouds gather. The sky grows dark. The wind whistles. Small drops of rain begin to fall. Then, the large, loud storm begins! Soon, water is everywhere.

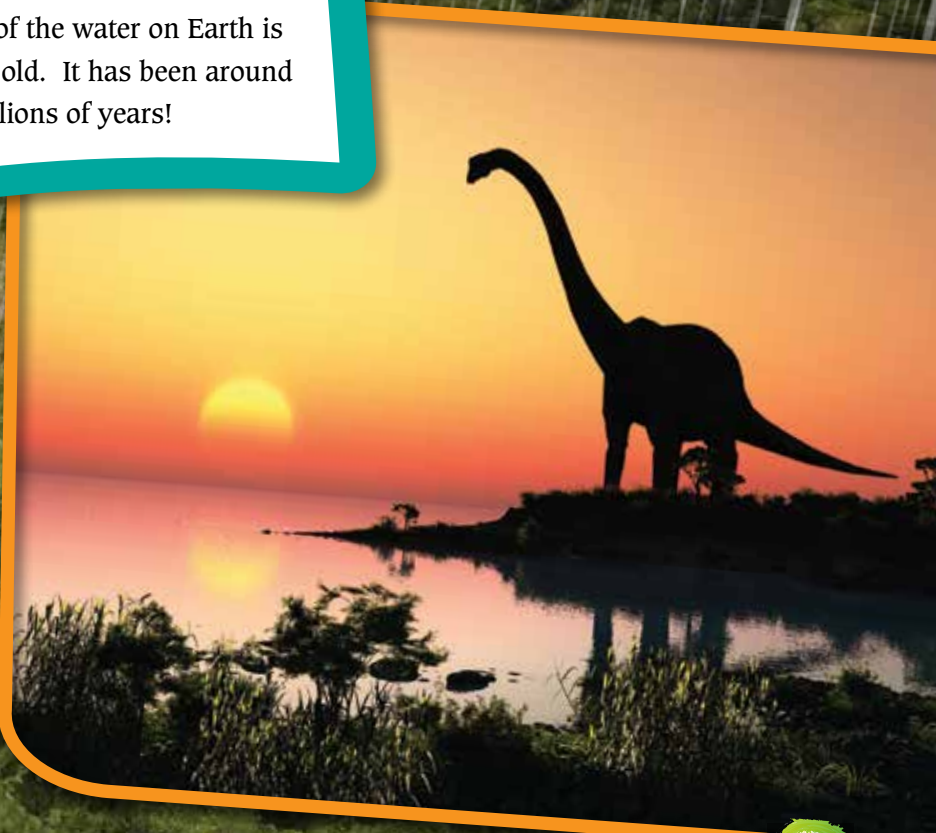

For teachers' inspection ONLY

When there's a storm, it's easy to find water. But if you look closely, even on a sunny day, there is water all around.

Old Water

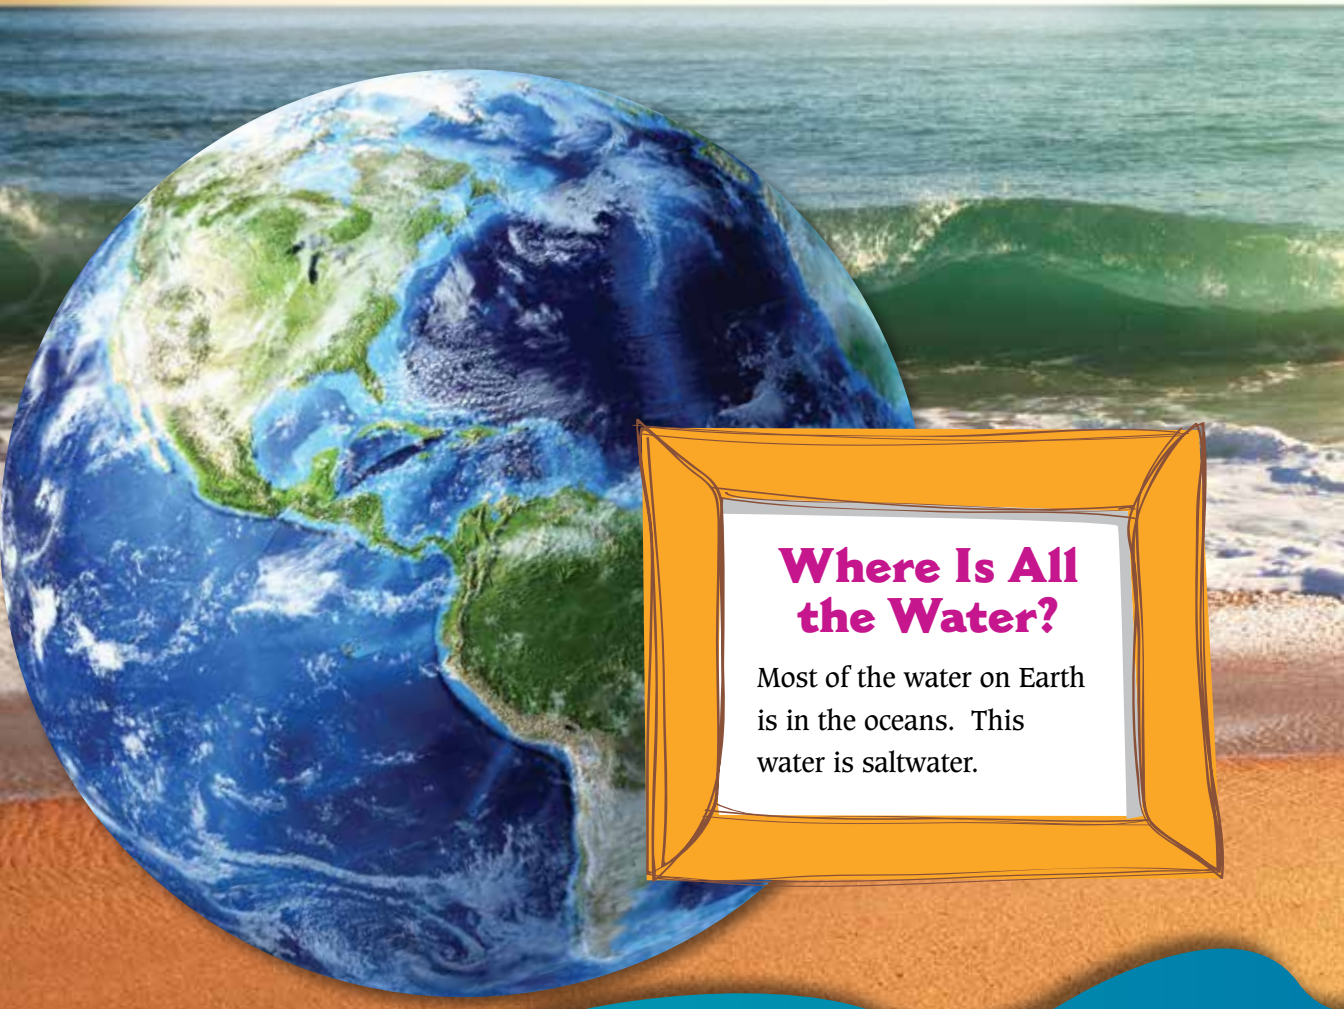

Most of the water on Earth is really old. It has been around for billions of years!

For teachers' inspection ONLY

Water flows through streams. It runs down rivers. It fills our oceans. Waves of water crash on our beaches.

Water is in plants. Water is in animals. Water is even in you! It is everywhere, and it is on the move.

Where Is All the Water?

Most of the water on Earth is in the oceans. This water is saltwater.

Let's Do Science!

How can you observe the water cycle?

See for yourself!

What to Get

- ❍ 2 mason jars (one with a lid)
- ❍ marker
- ❍ masking tape
- ❍ water
