A New Earth

spring peeper

Peep! **Peepers** chirp and ducklings quack. Bunnies nibble new grass.

The early morning air is cool.
It smells like rain, earth, and
blossoms. This is spring!

tulips

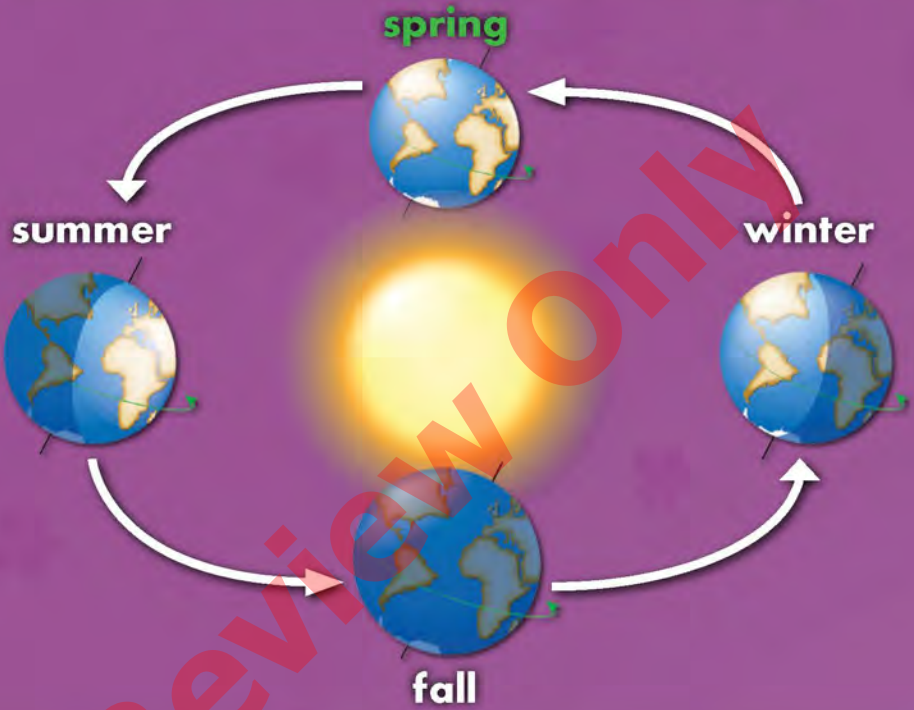

When Is Spring?

apricot blossoms

Spring follows winter. In the **Northern Hemisphere**, spring starts in March.

Earth's Position in Spring

Earth's tilt allows the Northern and Southern Hemispheres to get equal daylight in spring. Days get longer as summer gets closer.

April and May are other months in spring.

Spring Weather

crocuses

During spring, there is more sunlight, and **temperatures** begin to rise.

The weather can change quickly.
Some days are warm and sunny.
Others are cool and rainy.
