Andre Louw

I'm Tammy and this is
my camera. Come on, I
want to show you guys
something!

After school, the first place Tammy always goes is the hospital. She isn't sick or anything; she's just visiting. She's seeing her brother Josh, and all the doctors and nurses know her by now.

GUESS

What do you think is wrong with the girl on the bed? Why is she in the hospital?

M 15
5H

"I have a new comic book for you, Josh," she says with a big smile.

"Do you think this is about a robot or an alien?" Josh doesn't reply.

"Look, fresh blueberries too! I know you love them."

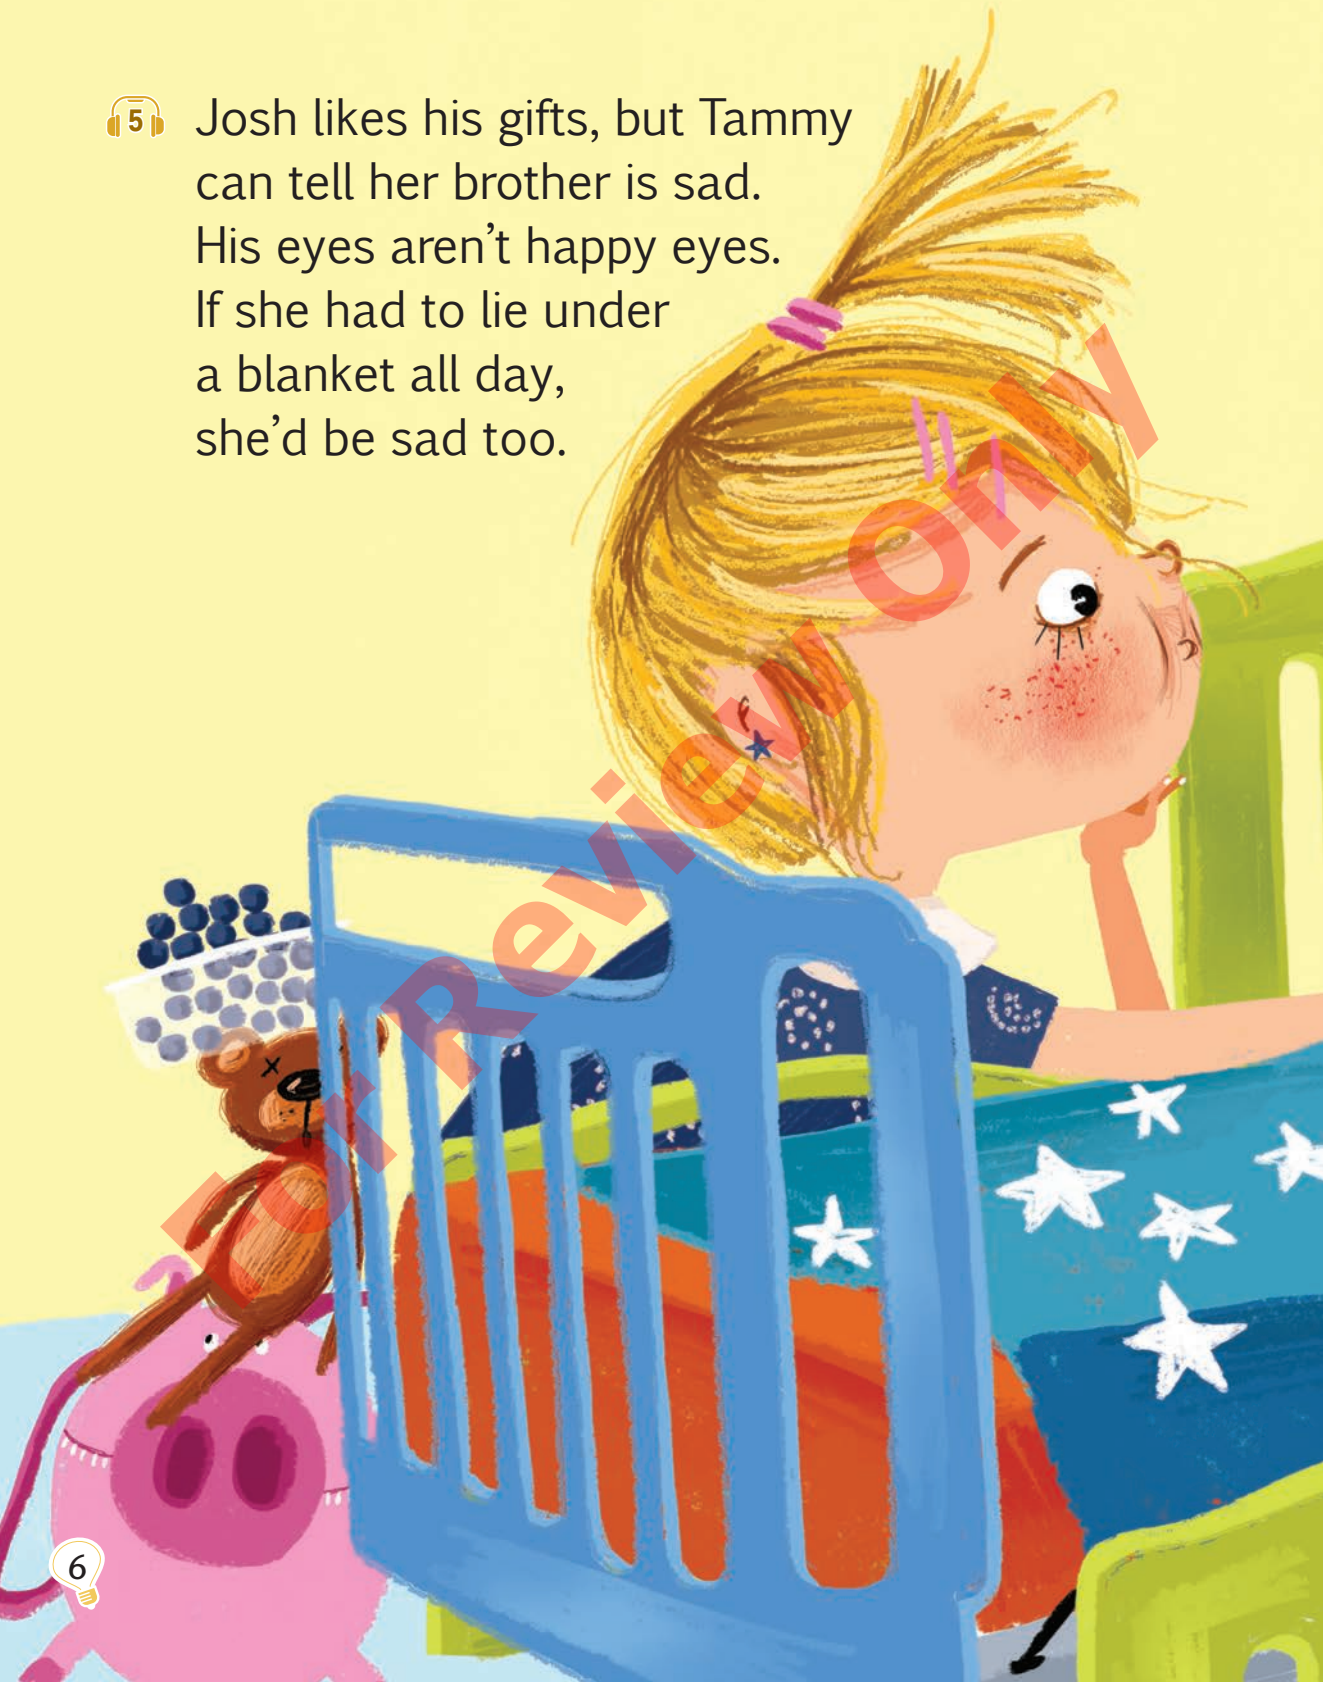

LOOK & SAY

Does Josh look excited about his gifts? Why do you think so?

Josh likes his gifts, but Tammy
can tell her brother is sad.
His eyes aren't happy eyes.
If she had to lie under
a blanket all day,
she'd be sad too.

THINK

If you were Tammy,
what would you
bring for your sick
brother or sister?

I See What You Mean, Doctor!

At Boston Children's Hospital, doctors are using technology to help kids see with their own eyes how their bodies work and are being treated. A kid-friendly app is also making it easier for them to understand difficult medical concepts.

Thanks to 3D imaging, young patients can now even take a virtual tour inside their own organs and understand their conditions better than ever before!

1. Listen and match the YouTuber on the left to the correct picture on the right.

Through Your Eyes

You will need:

a script

**a video camera,
smartphone, or
tablet**

a place you know well

a selfie stick

1. Choose a place in your hometown that you can introduce to others. It can be places you like to exercise, play, hang out, shop, or even eat at.
