Ships

There are many kinds of ships.

Ships can carry very big loads across the sea.

For teachers' inspection ONLY

Ships are much bigger
than boats.
The first ships and boats
were made of wood.
Some of them had sails.

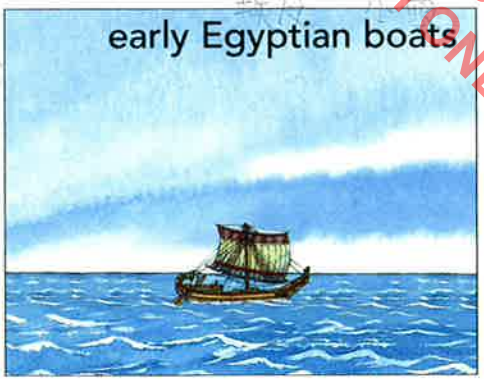

Now ships are made of steel.
They have engines
to help them move through the water.

Ships and boats long ago...

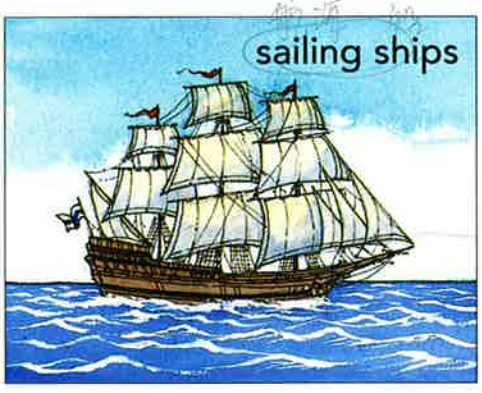

These boats had one big sail and were used for long trips.

Longboats
were made of wood.
They were very strong
in heavy seas.

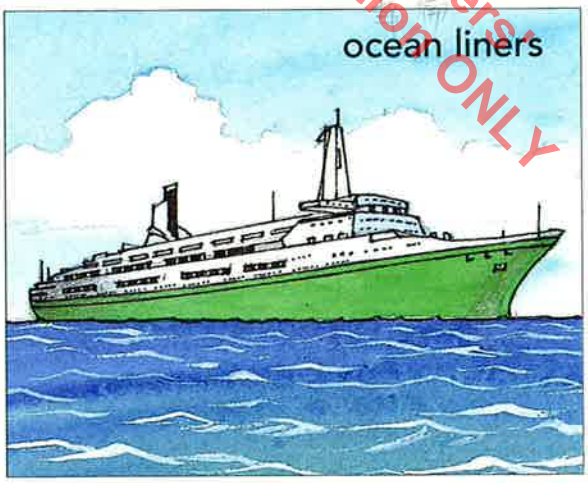

These ships had many sails and could go a long way across the sea.

Ships today...

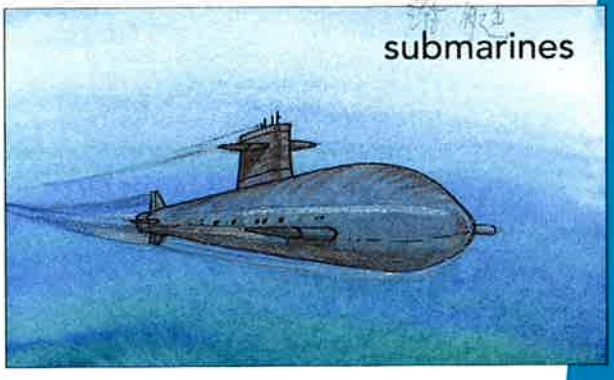

Ocean liners are much faster than sailing ships.
They use engines.

These ships take huge loads from one place to another.

Submarines are ships that can go under the sea.

Sailing the seas

Long ago, sailing ships
were the only way to cross the sea.

Painting of an old sailing ship
